

Unlock Talent,
Accelerate
Innovation

JOURNEY

Our journey began as an incubation start-up at Ignite Startup Accelerator in 2024. Today, we have grown to establish our own identity as Quantum Pulse Technologies in the fields of Advanced Engineering and Talent Solutions.

QP is all about customization and meeting customer needs with step-by-step hand-holding and collaboration to build tailored solutions for your needs. Irrespective of the industry, we offer innovative engineering solutions that will drive impactful business results.

LEADERSHIP TEAM

Mr.R.Rajaram
Managing Director

Mr.R.Mohanram
Director

Mr.Eshwar Ram
Director

Mr.Sathya Narayanan
Director - Business Operations

“

QP is led by a perfect mix of senior veteran entrepreneurs, young and energetic engineering talent. This makes QP a natural choice for our customers. You get both – the experienced business wisdom and the youthful creativity!

BUSINESS VERTICALS

We offer 3 major services for our customers

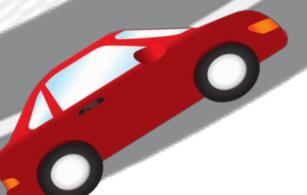

RPO Services

We additionally offer customized recruitment process solutions, to scale your business. Our robust RPO solutions effectively attract talent while minimizing hiring time (TAT) and costs.

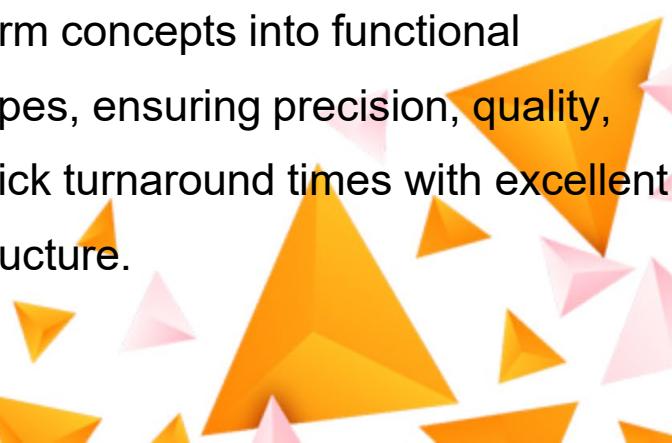

Design Services

We provide expert design solutions, including PCB design, embedded systems development, concept to co-creation, and built innovative products from concept to market with precision and efficiency.

Proto Build

We offer streamlined prototype build services that accelerate product development across mechanical, electrical, and electronic domains. By closely collaborating with clients, we transform concepts into functional prototypes, ensuring precision, quality, and quick turnaround times with excellent infrastructure.

QP - DESIGN

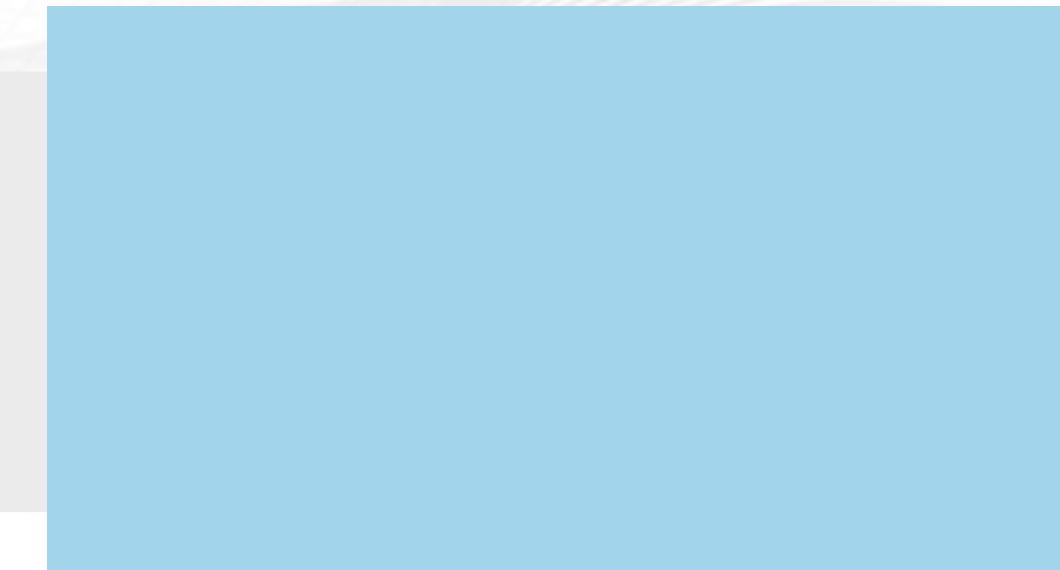

Need the expertise to design your actual product?

We provide expert design solutions, including PCB design, embedded systems development, concept to co-creation, and built innovative products from concept to market with precision and efficiency.

- **End-to-End Product Design & Development Cycle**

- **Embedded Software Development**

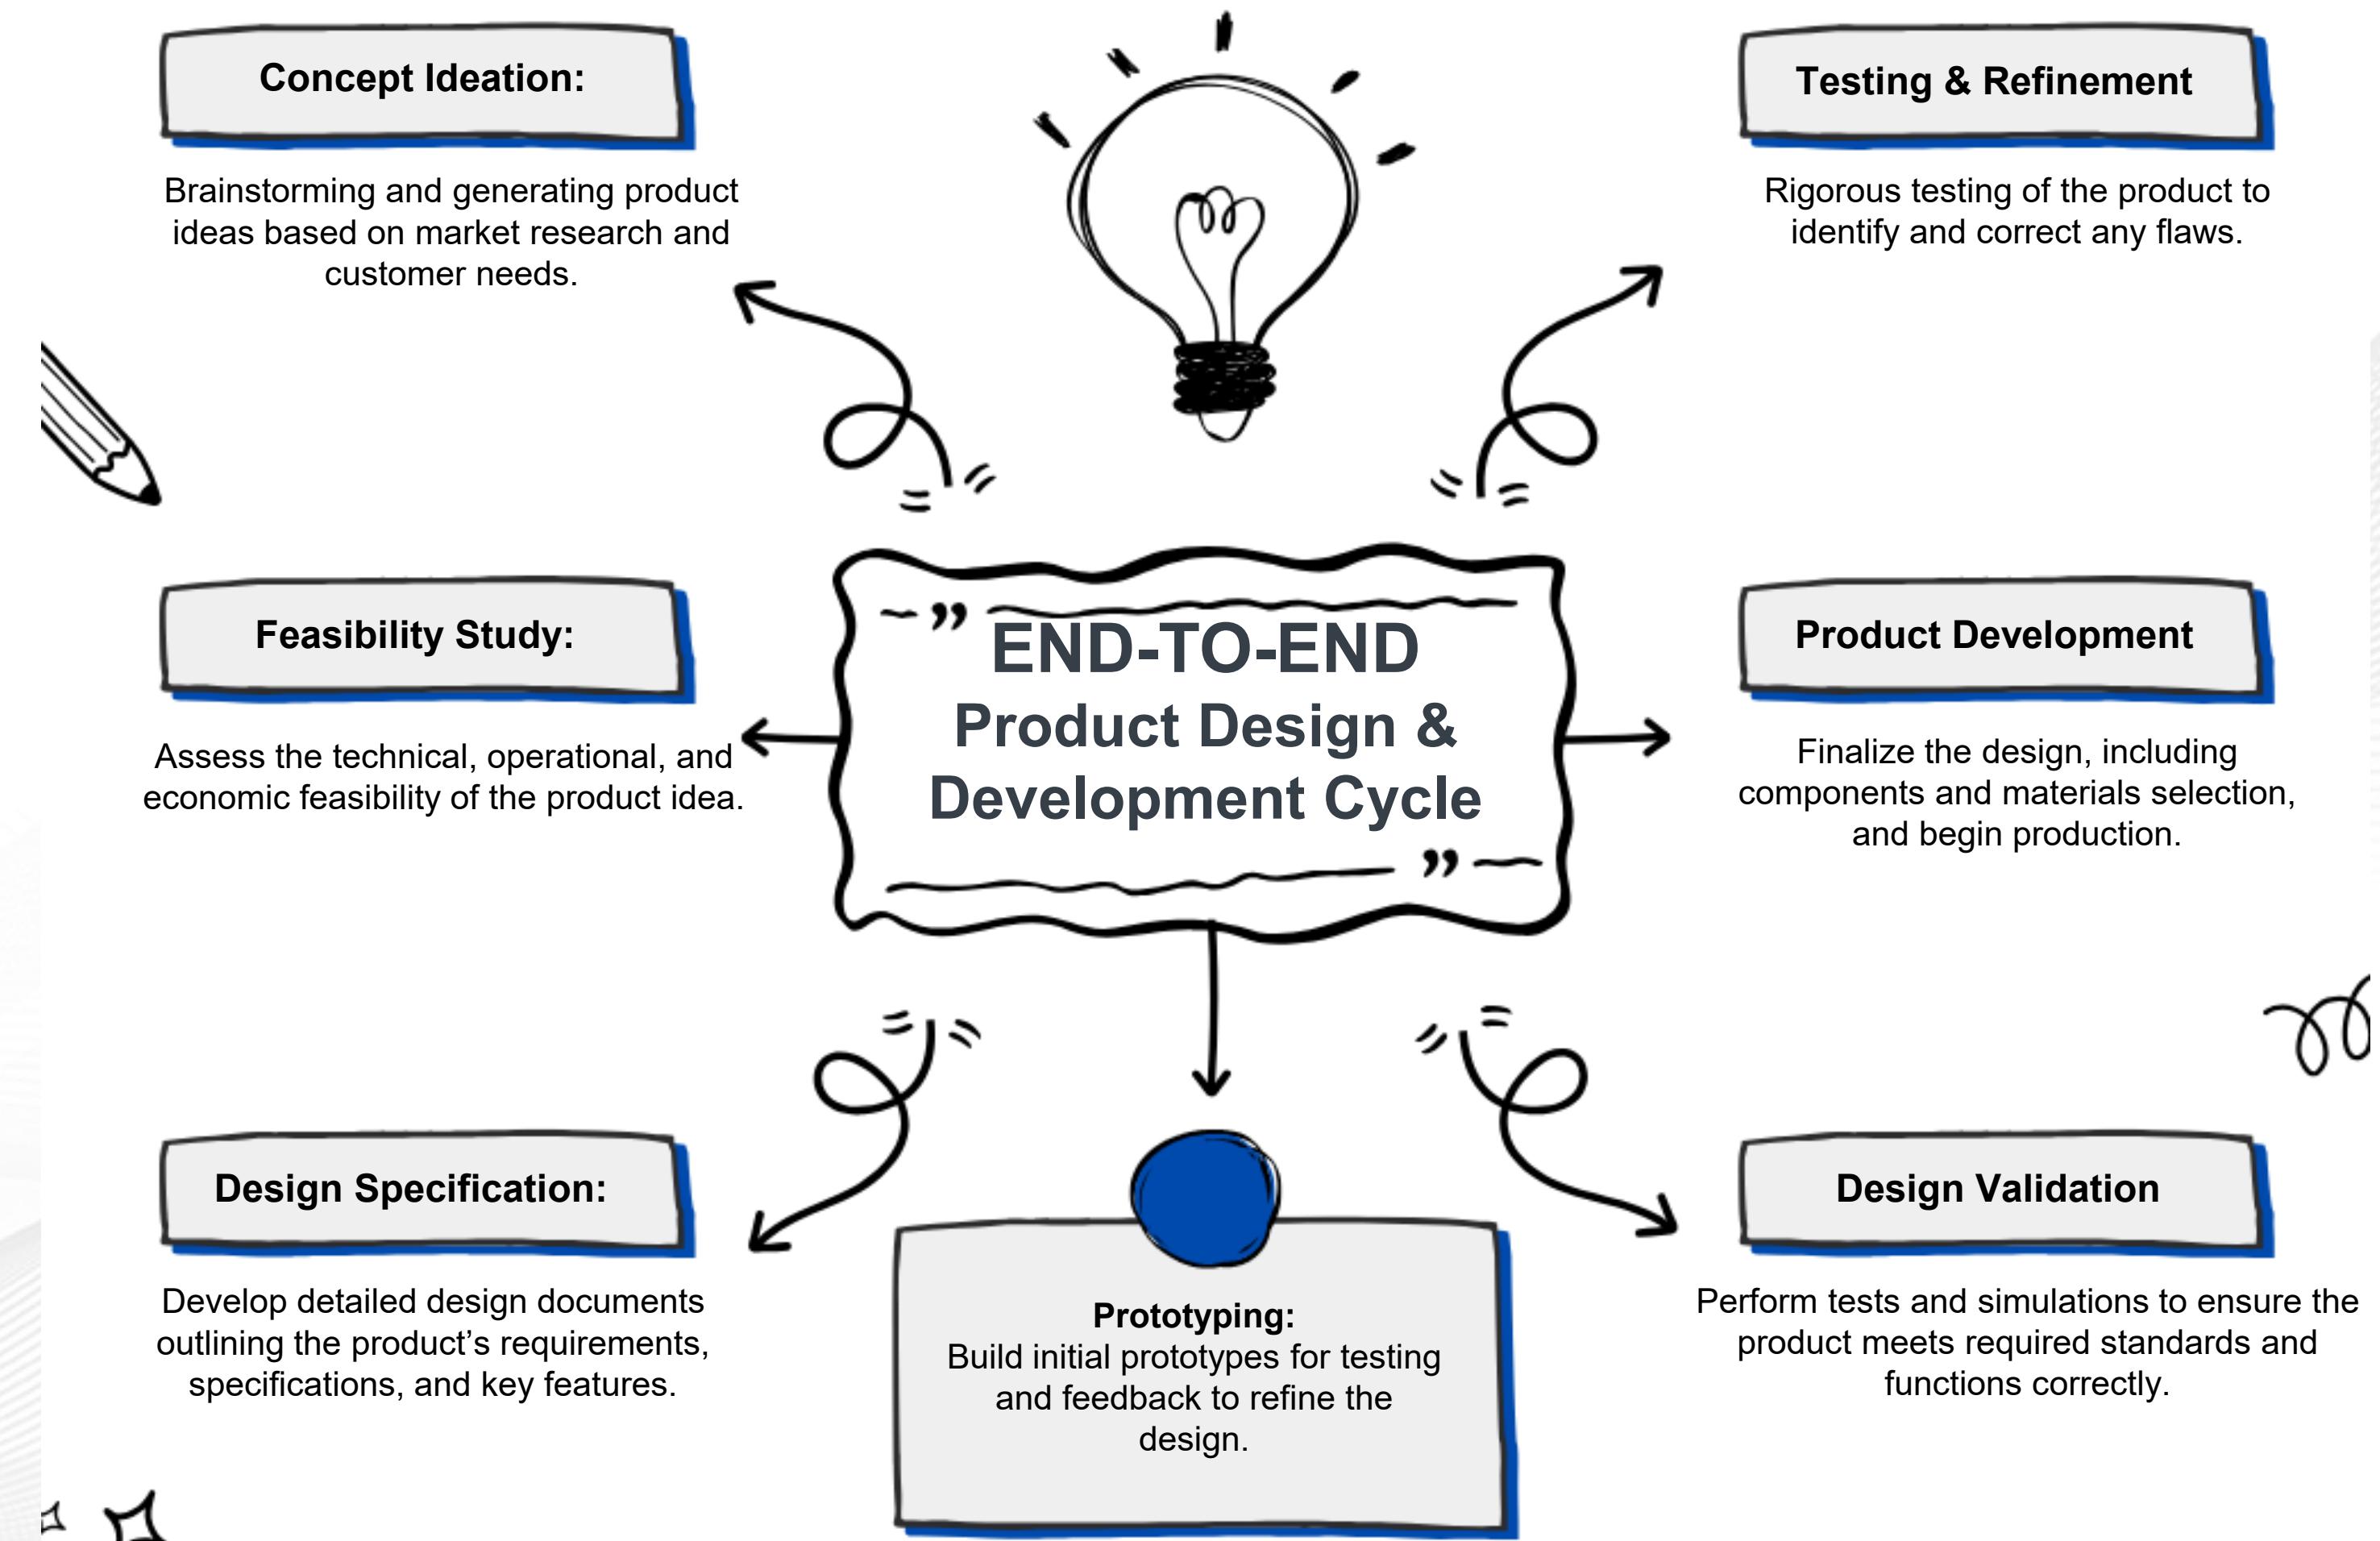

- **PCB & Hardware Design**

- **Prototyping and testing**

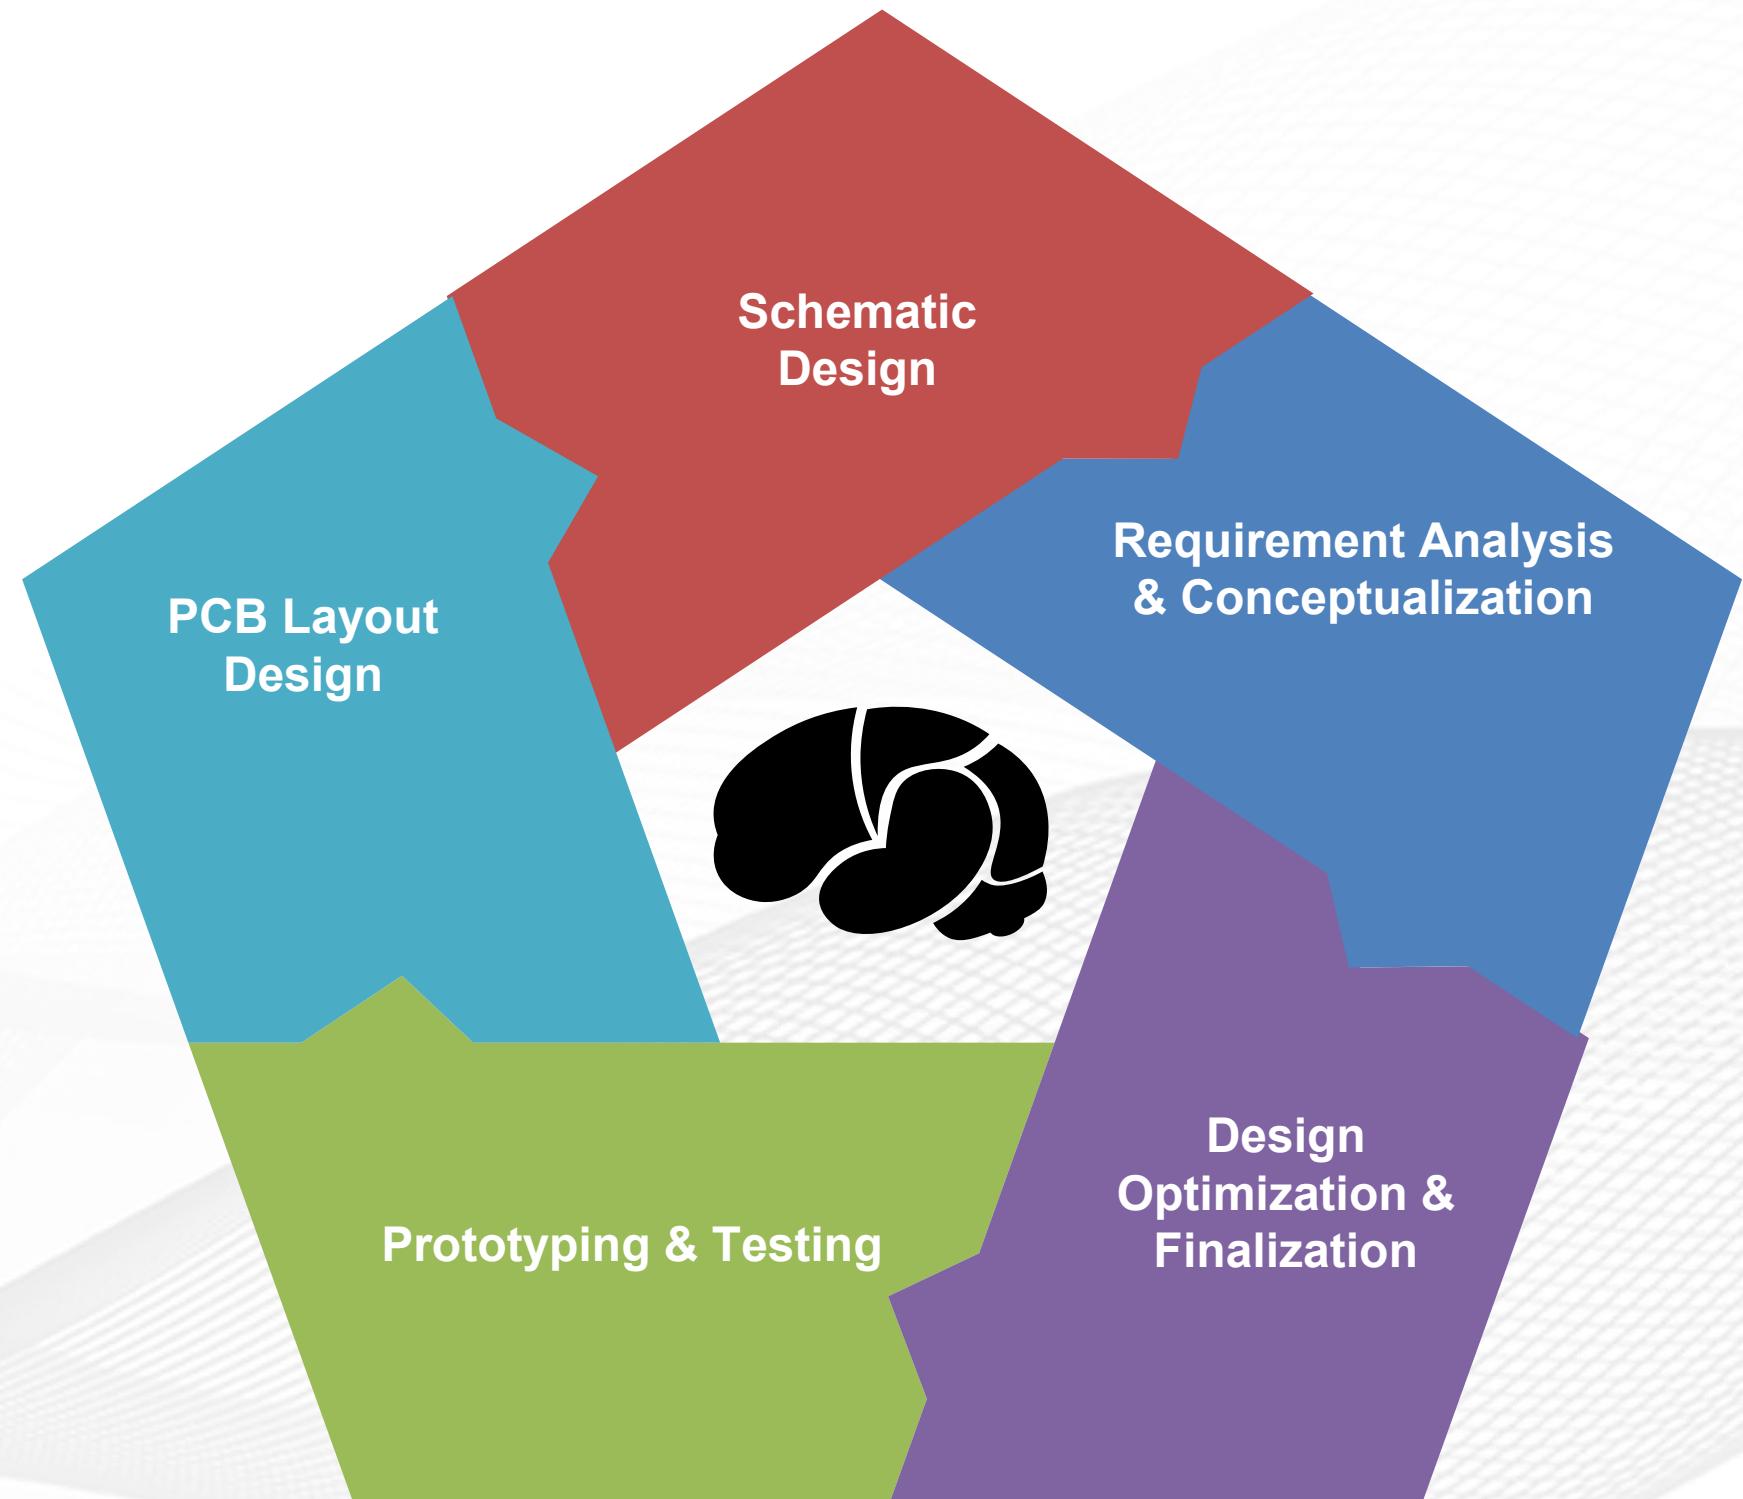

A comprehensive approach that manages the entire product development lifecycle, from concept creation to final product delivery.

PCB & HARDWARE DESIGN

Design and development of printed circuit boards (PCBs) and electronic hardware, which serve as the backbone of electronic devices.

Create circuit diagrams outlining how components will connect and interact within the hardware.

Define product requirements, functional specifications and hardware needs based on the project scope.

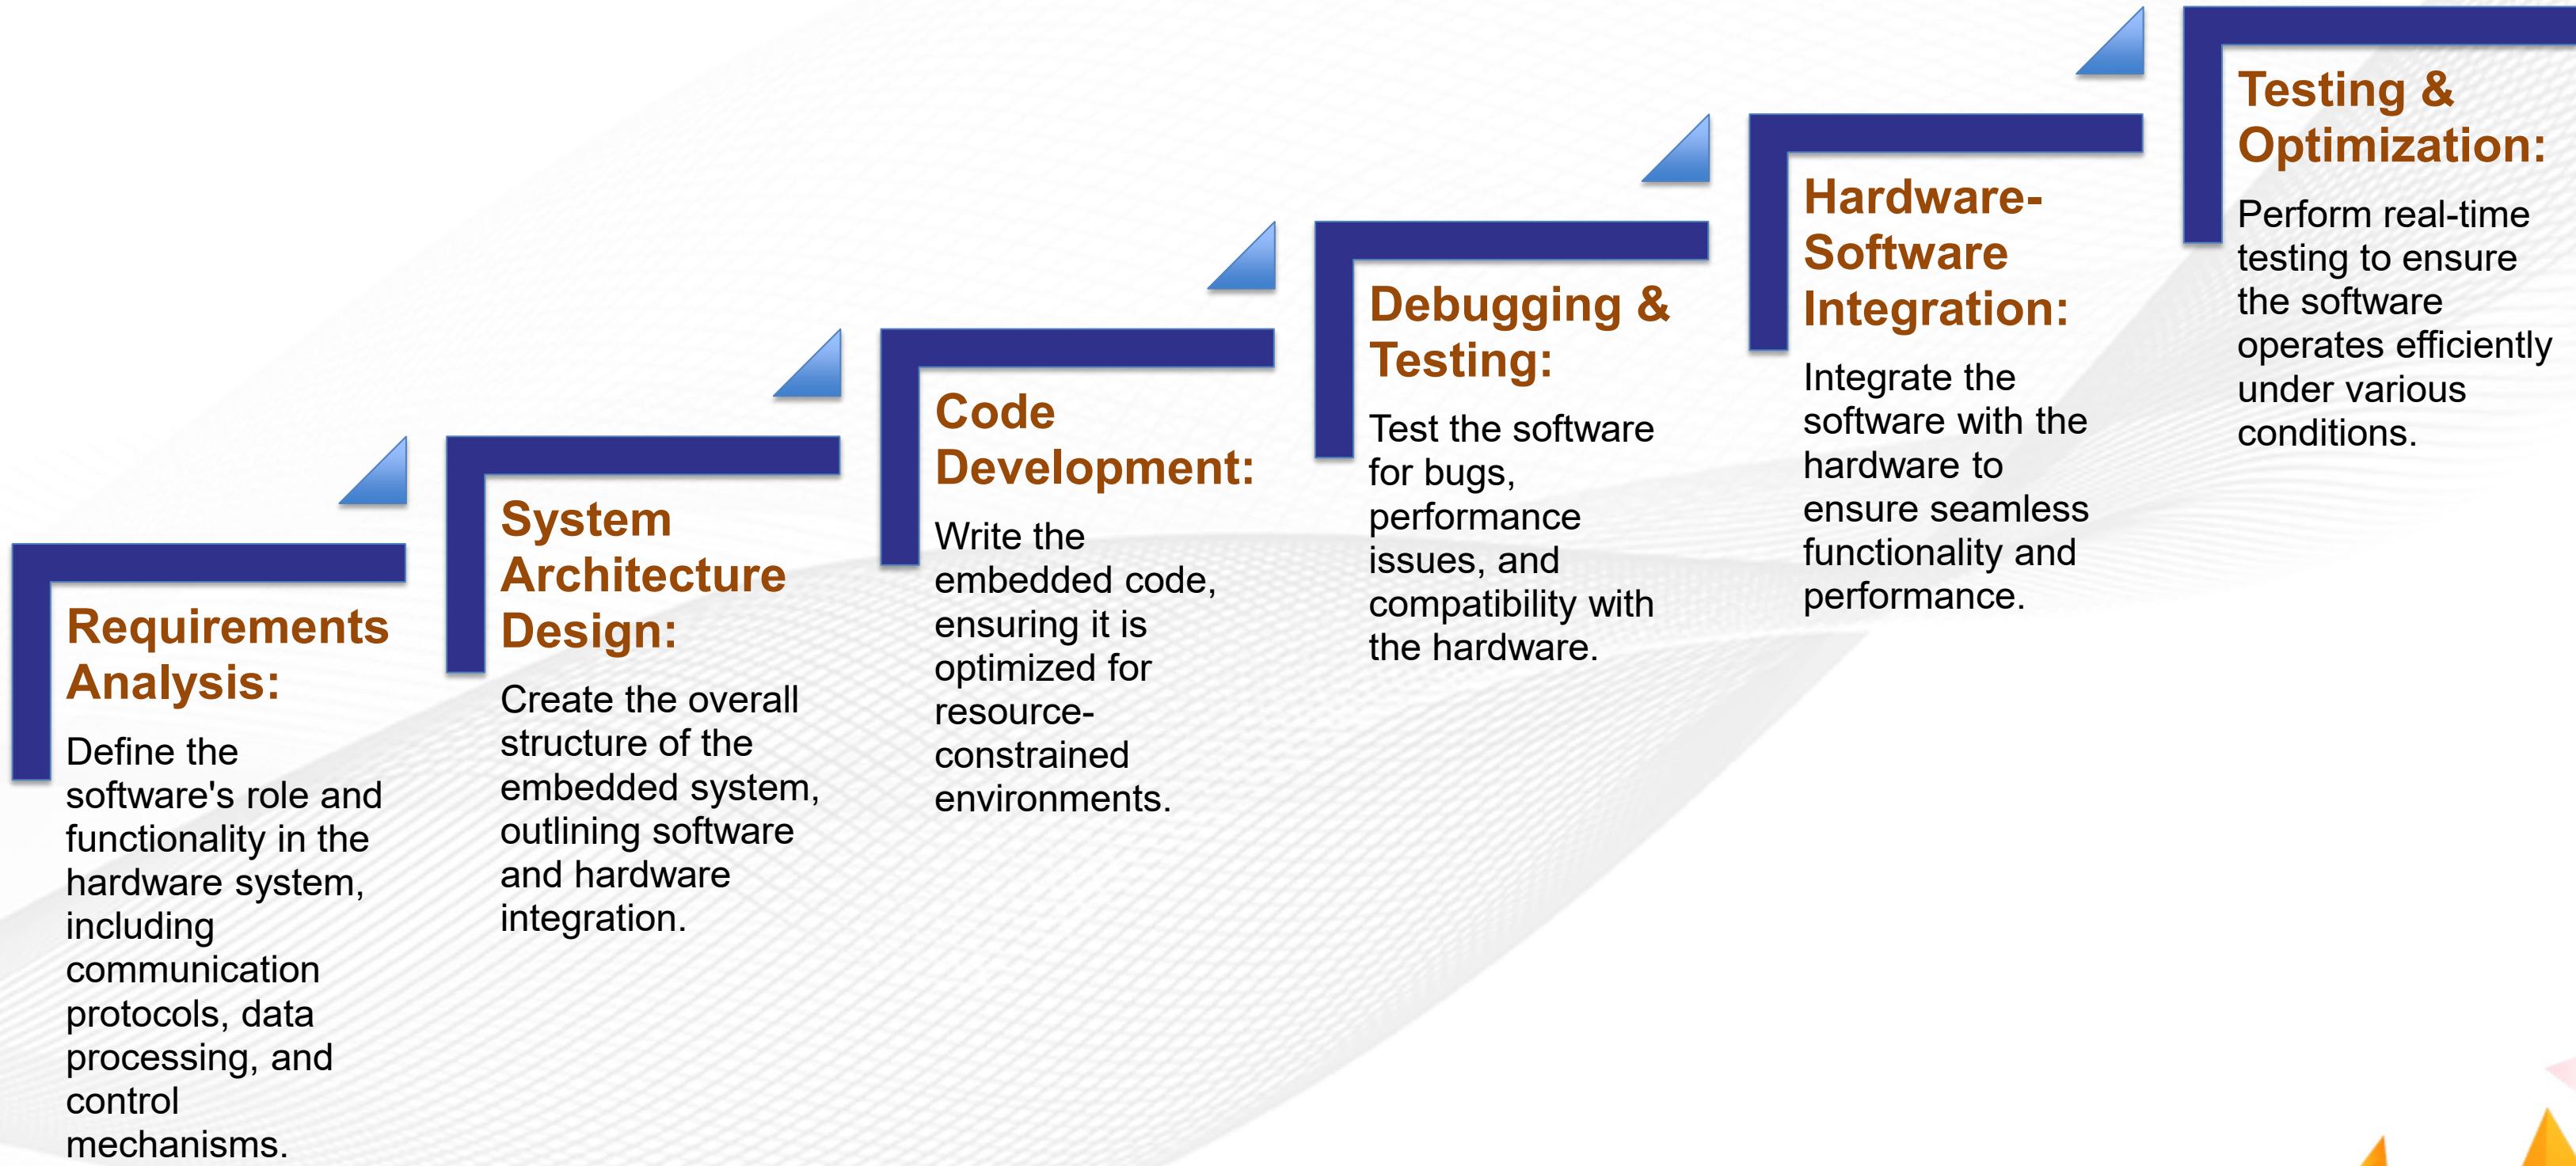

Make any necessary refinements based on testing results and finalize the design for mass production.

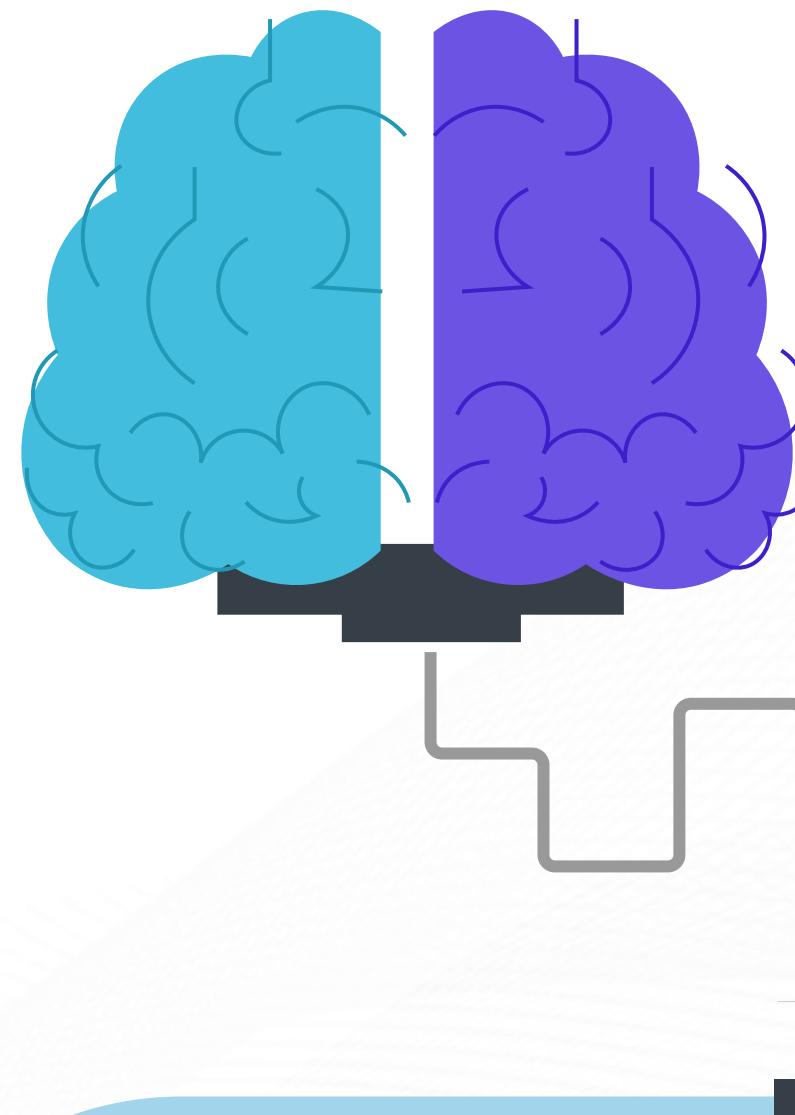

Fabricate the initial PCB prototype and conduct rigorous testing to verify functionality, signal integrity and hardware performance.

Design the physical layout of components on the PCB, optimizing for signal integrity, power distribution, and space constraints.

EMBEDDED SOFTWARE DEVELOPMENT

Developing software designed to run on hardware devices to control their functions and interact with other components.

PROTOTYPING & TESTING

The process of **creating a working model or prototype of a product to test its design, functionality, and usability before full-scale production.**

Design Translation

Convert the product's design and specifications into a physical model.

Prototype Creation

Use 3D printing, CNC machining, or other methods to build an initial prototype for physical testing.

Testing & Evaluation

Test the prototype for performance, reliability, and user experience under different conditions.

Feedback & Iteration

Gather feedback from testing and refine the prototype accordingly.

Functional & Stress Testing

Conduct rigorous testing to assess the product's functionality under normal and extreme conditions.

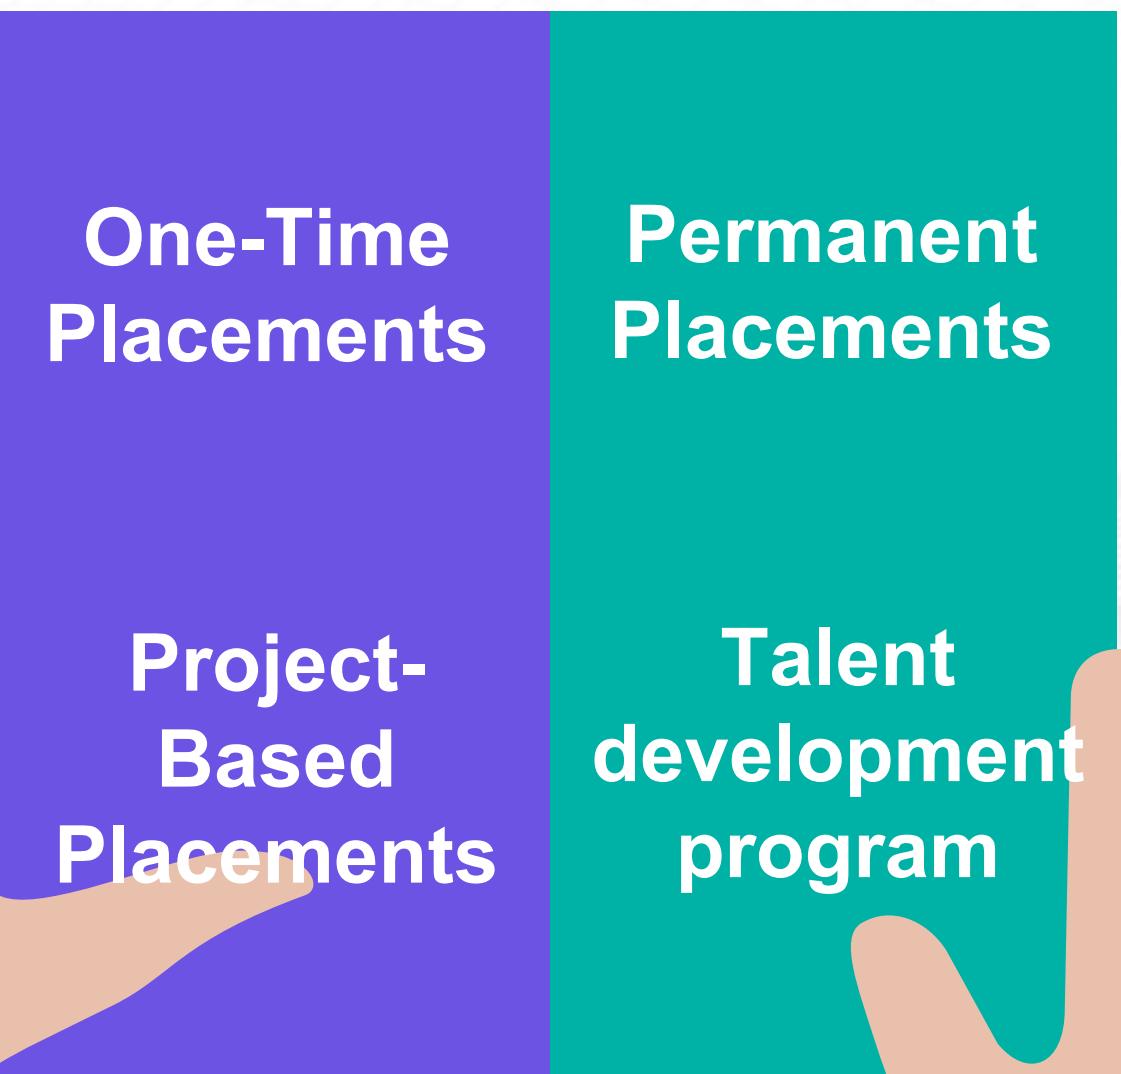

QP - HIRE

Feeling confident of your design and wish to scale your business?

We additionally offer customized recruitment process solutions, to scale your business. Our robust RPO solutions effectively attract talent while minimizing hiring time (TAT) and costs

RPO

**Recruitment Process
Outsourcing (RPO)**

One-Time Placement

- QP offers a one-time placement service.
- Candidates are sourced based on the job description (JD) provided by the client.
- The QP recruitment team collaborates with the client to screen and select candidates. Candidates are evaluated to meet both the technical and cultural requirements of the client.
- The process ensures a seamless hiring experience. Selected candidates are placed permanently at the client's location after the selection.

Permanent Staffing

- QP specializes in recruiting technical staff for deployment to the client's site.
- Recruited staff remain on QP's payroll throughout their placement.
- Placements typically last for a minimum period of 12 months.
- Clients benefit from flexibility as employees integrate directly into their workflow. QP manages recruitment, payroll and administrative responsibilities.
- This model provides a long-term, committed workforce.
- Clients avoid the burden of immediate permanent employment contracts.

Project-Based Placements

QP offers a **project-based placement model** for specific projects that need technical expertise for a limited time.

Technical staff are hired and deployed to work with clients for 3 to 6 months on various projects.

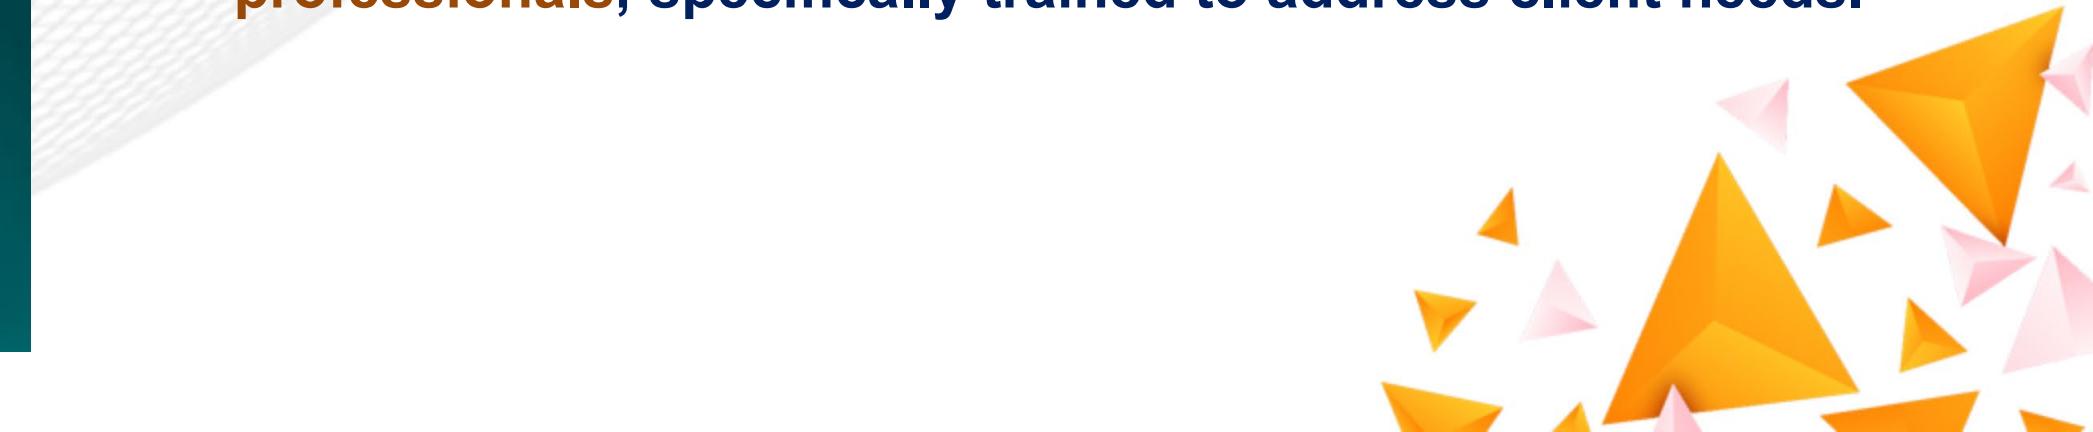

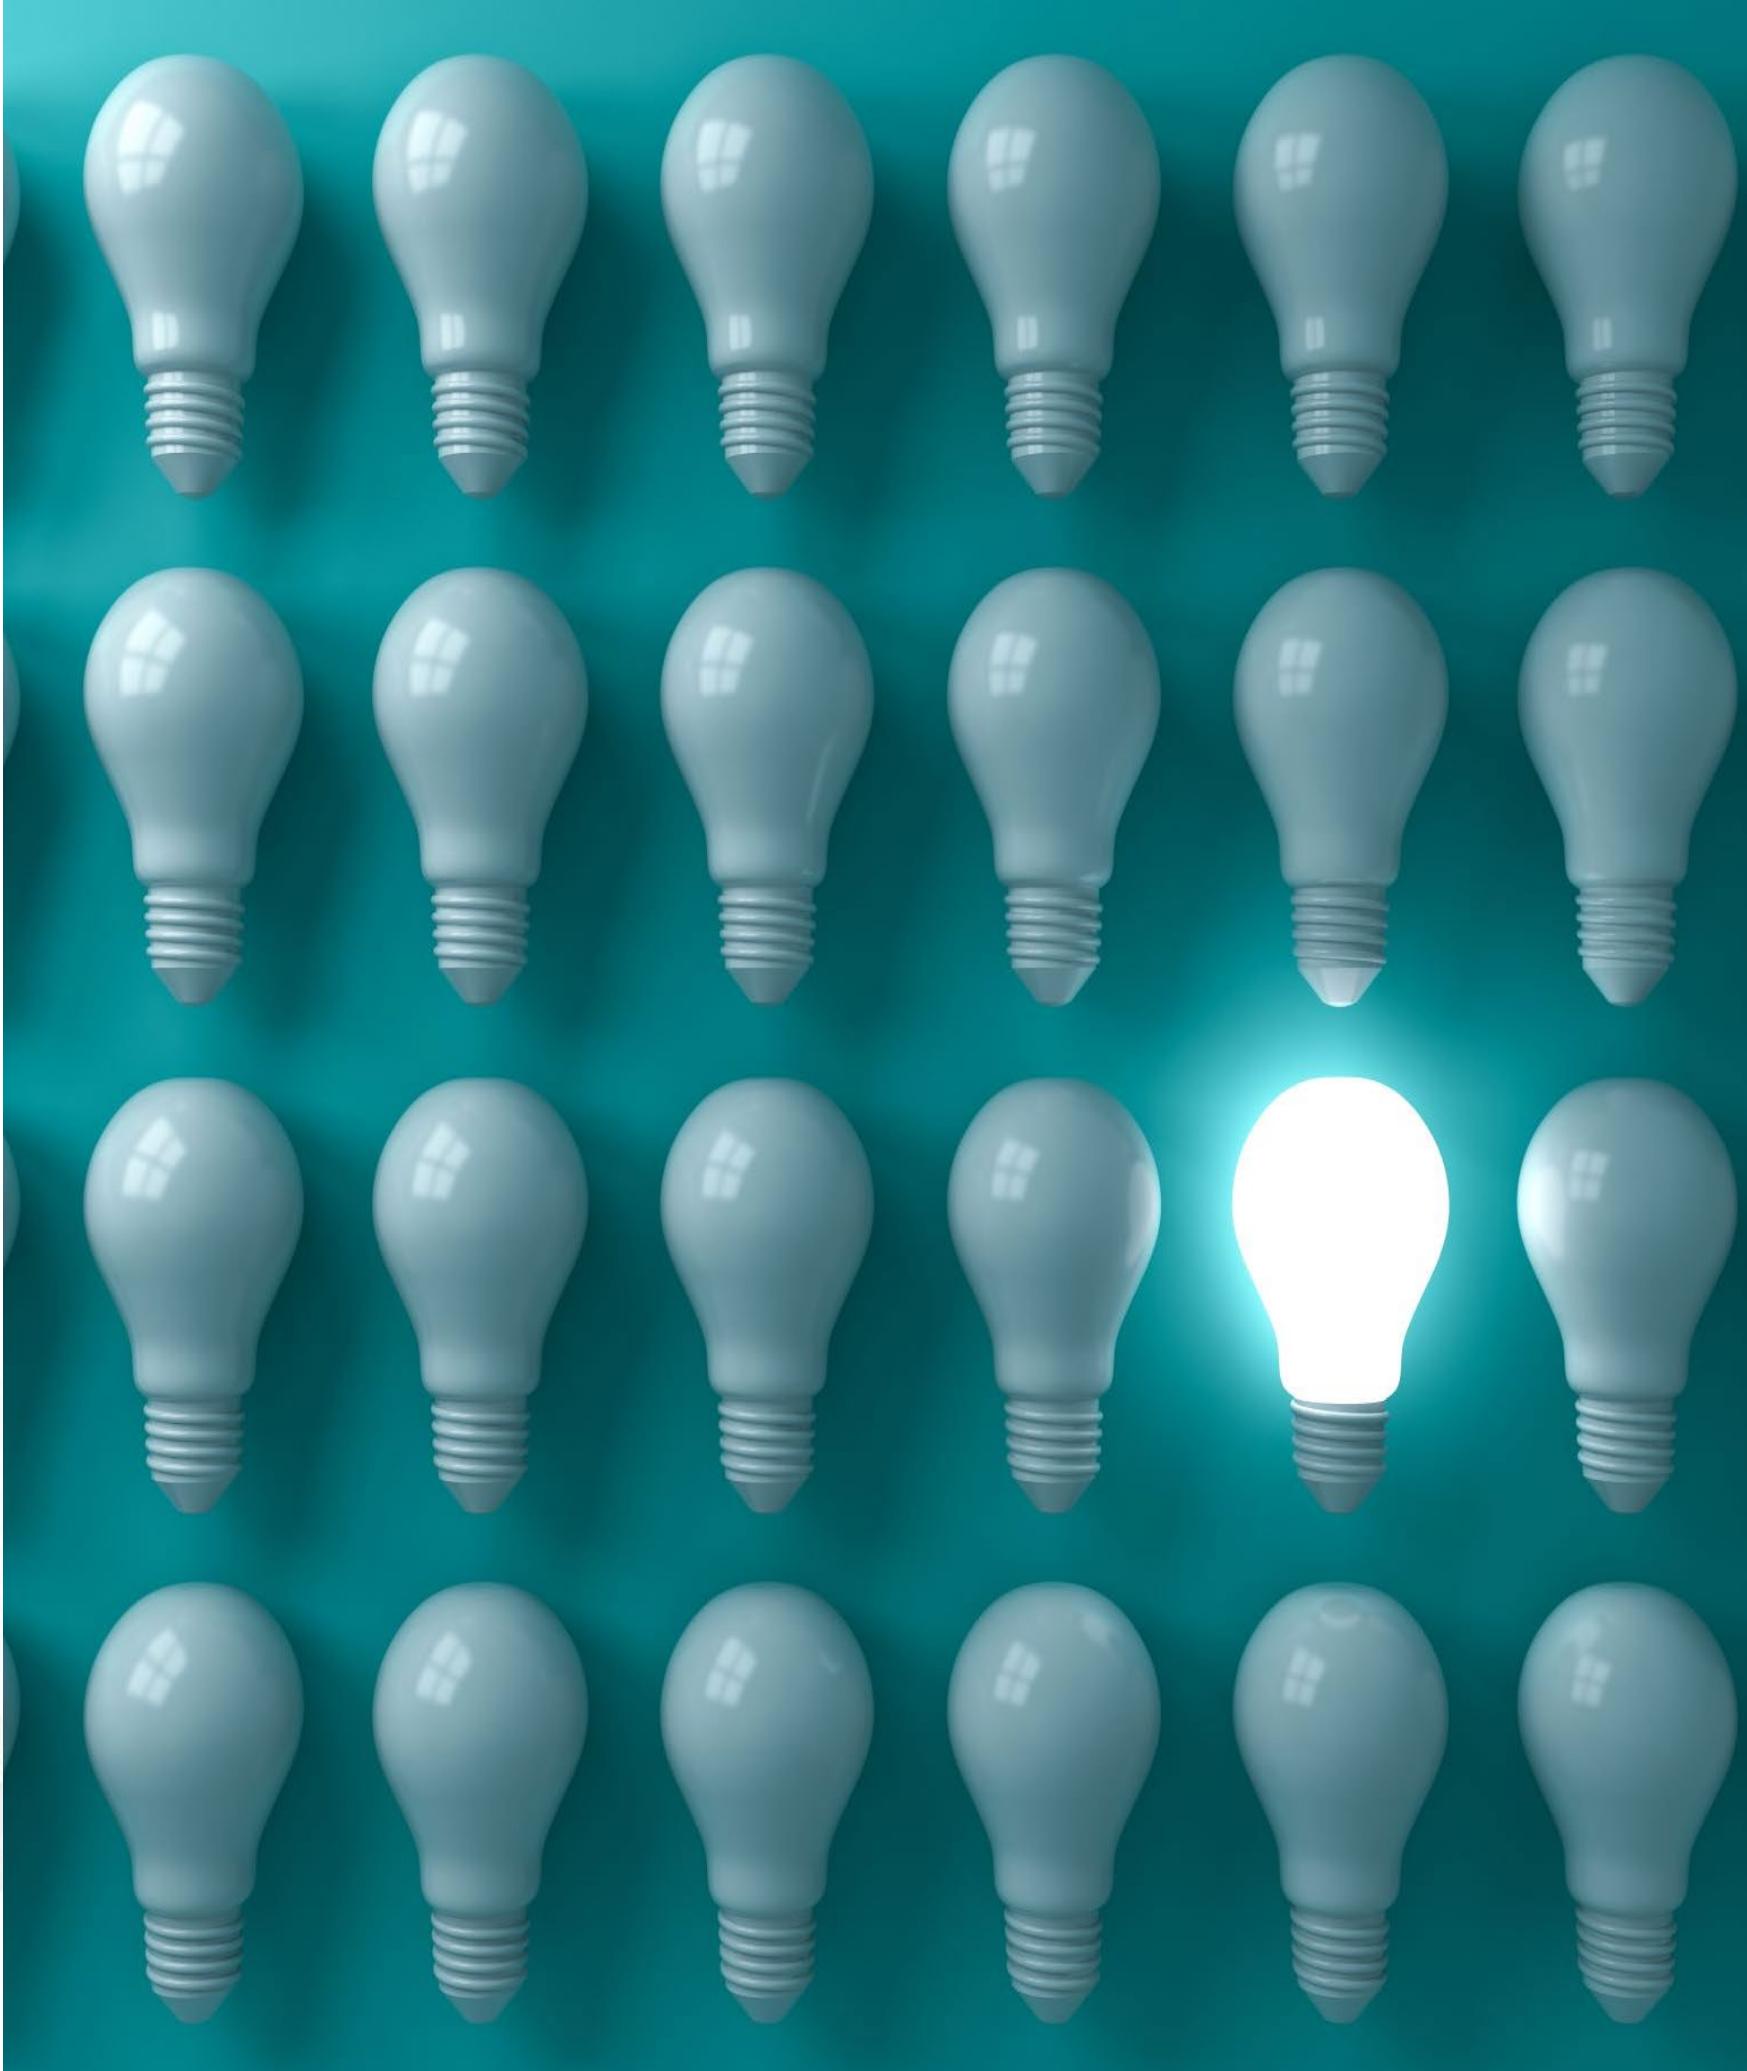

This model is ideal for companies that need **specialized skills** for short-term projects or urgent requirements.

It allows clients to avoid long-term hiring commitments while ensuring timely project execution.

Talent Development

- QP invests in nurturing fresh talent by hiring recent graduates and providing six months of training at QP's facilities.
- Graduates are trained in various design skills and industry-specific knowledge to meet client expectations.
- After completing the training program, these skilled individuals are placed directly at the client's site and join the client's payroll.
- This model ensures a consistent flow of skilled professionals, specifically trained to address client needs.

HOW WE WORK

01

Understanding Your Needs

We work with your HR and leadership to align hiring needs, culture, and goals, customizing RPO for one-time and strategic hires.

02

Sourcing Top Talent

Using our global network and advanced tools, we source top talent aligned with your needs and culture, ensuring quality and efficiency.

03

Screening & Selection

Our recruiters rigorously screen candidates to ensure only the most qualified are presented.

04

Hiring & Onboarding

We manage hiring, offer negotiations, and onboarding to ensure a smooth transition for candidates and the company.

05

Performance Tracking & Feedback

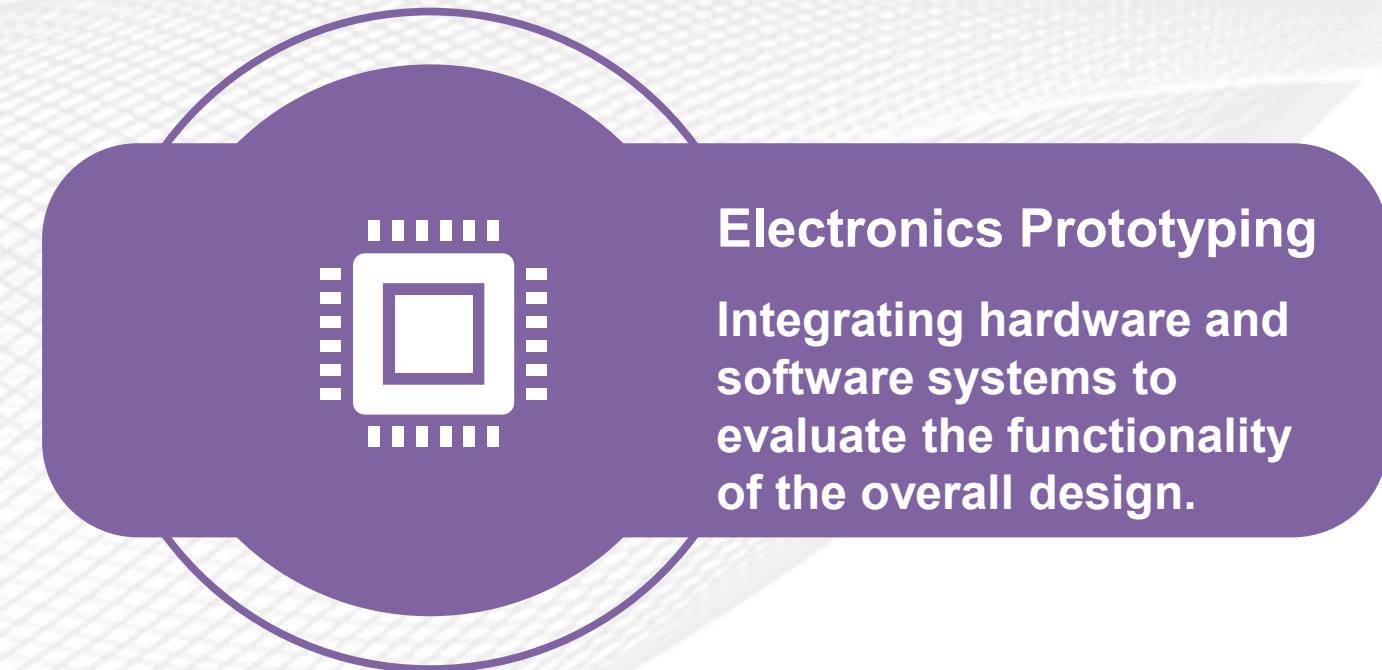

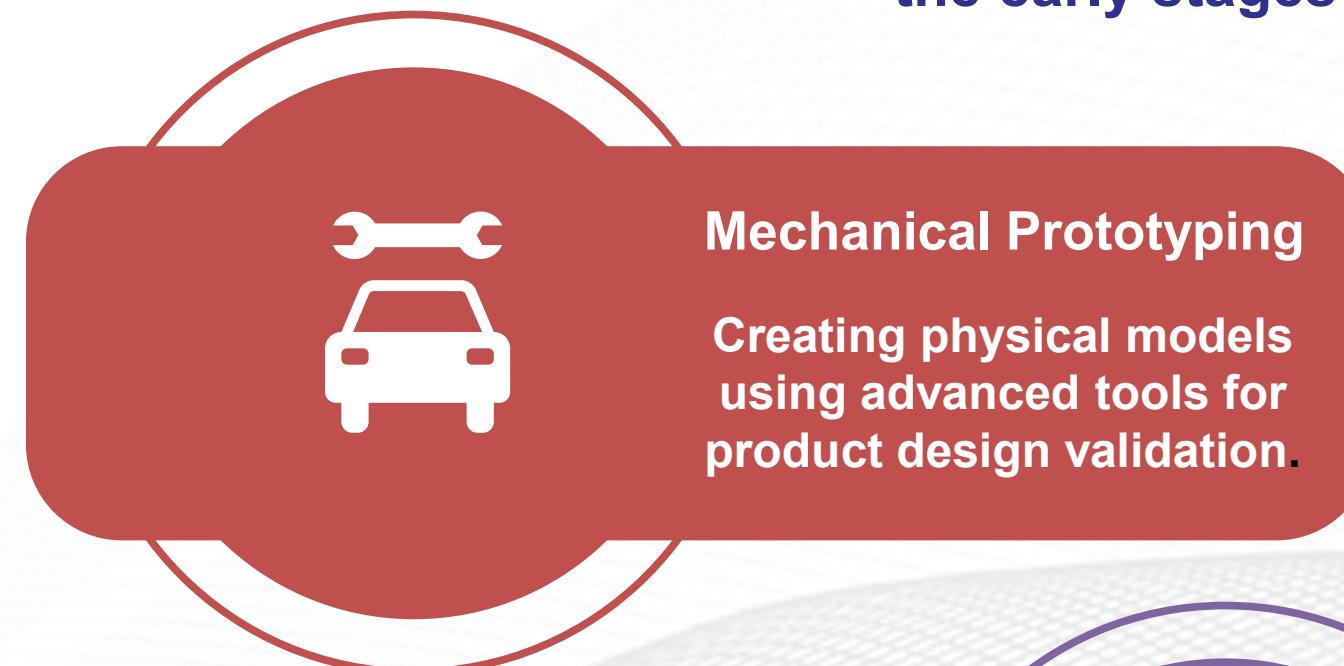

We track recruitment metrics like time-to-hire, cost-per-hire, and quality, providing real-time reports to optimize processes and ensure success.

PROTO BUILD

Conceptualization to Prototyping:

“Have a concept that you wish to try and don't know how to start?”

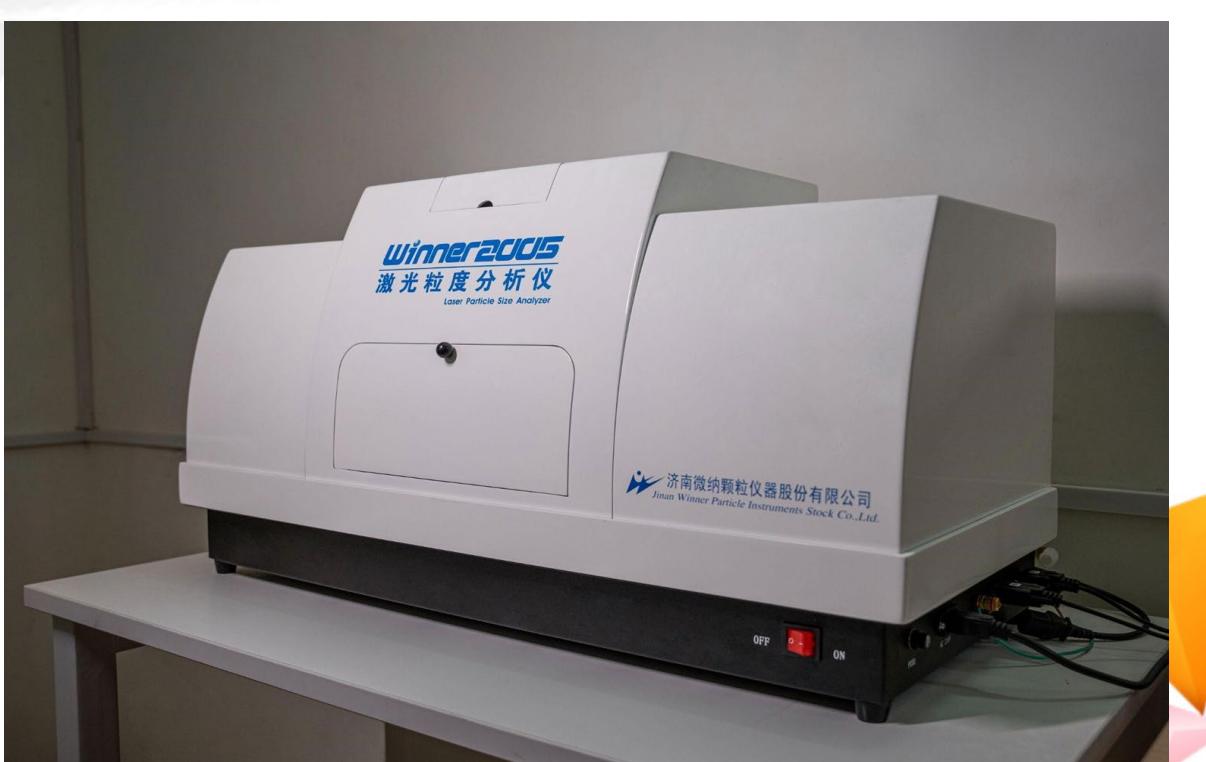

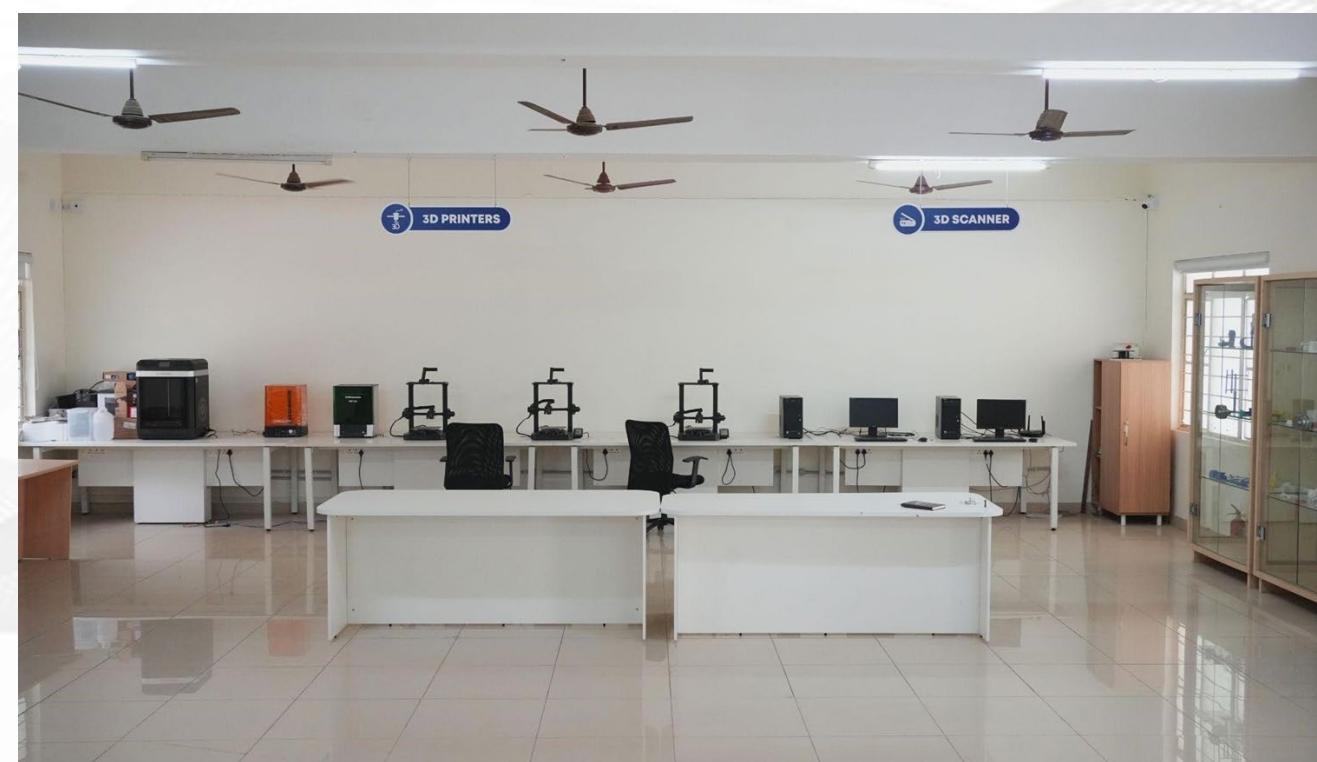

We transform product ideas into tangible prototypes, enabling real-time testing and evaluation for better decision-making in the early stages of product development.

Industries We Serve: Consumer Electronics | IoT Devices | Automotive Components

INFRASTRUCTURE

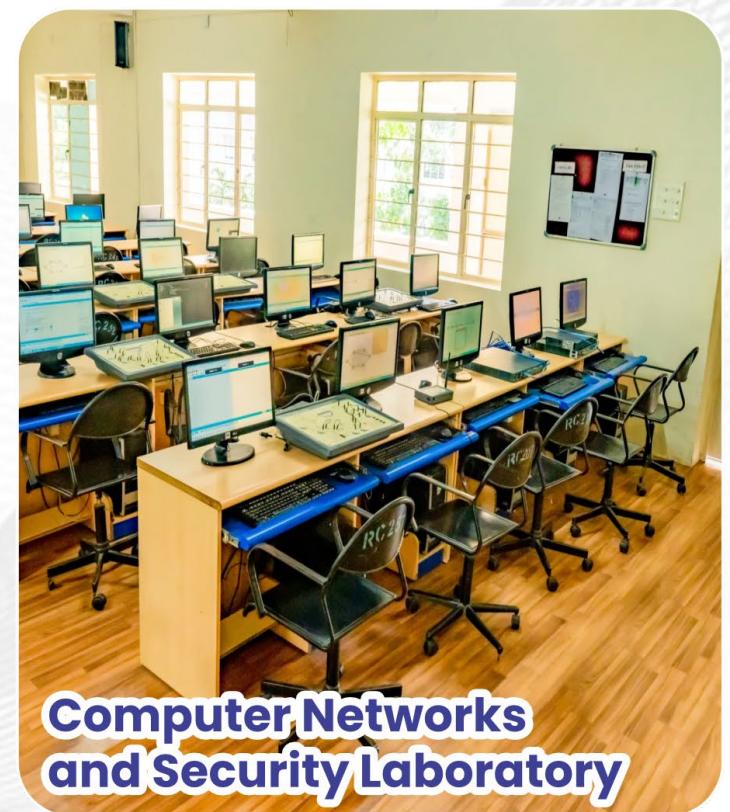

INFRASTRUCTURE

Embedded System and IoT Laboratory

Communication Systems Laboratory

Computer Networks and Security Laboratory

Digital System Design Laboratory

Digital Signal Processing Laboratory

INFRASTRUCTURE

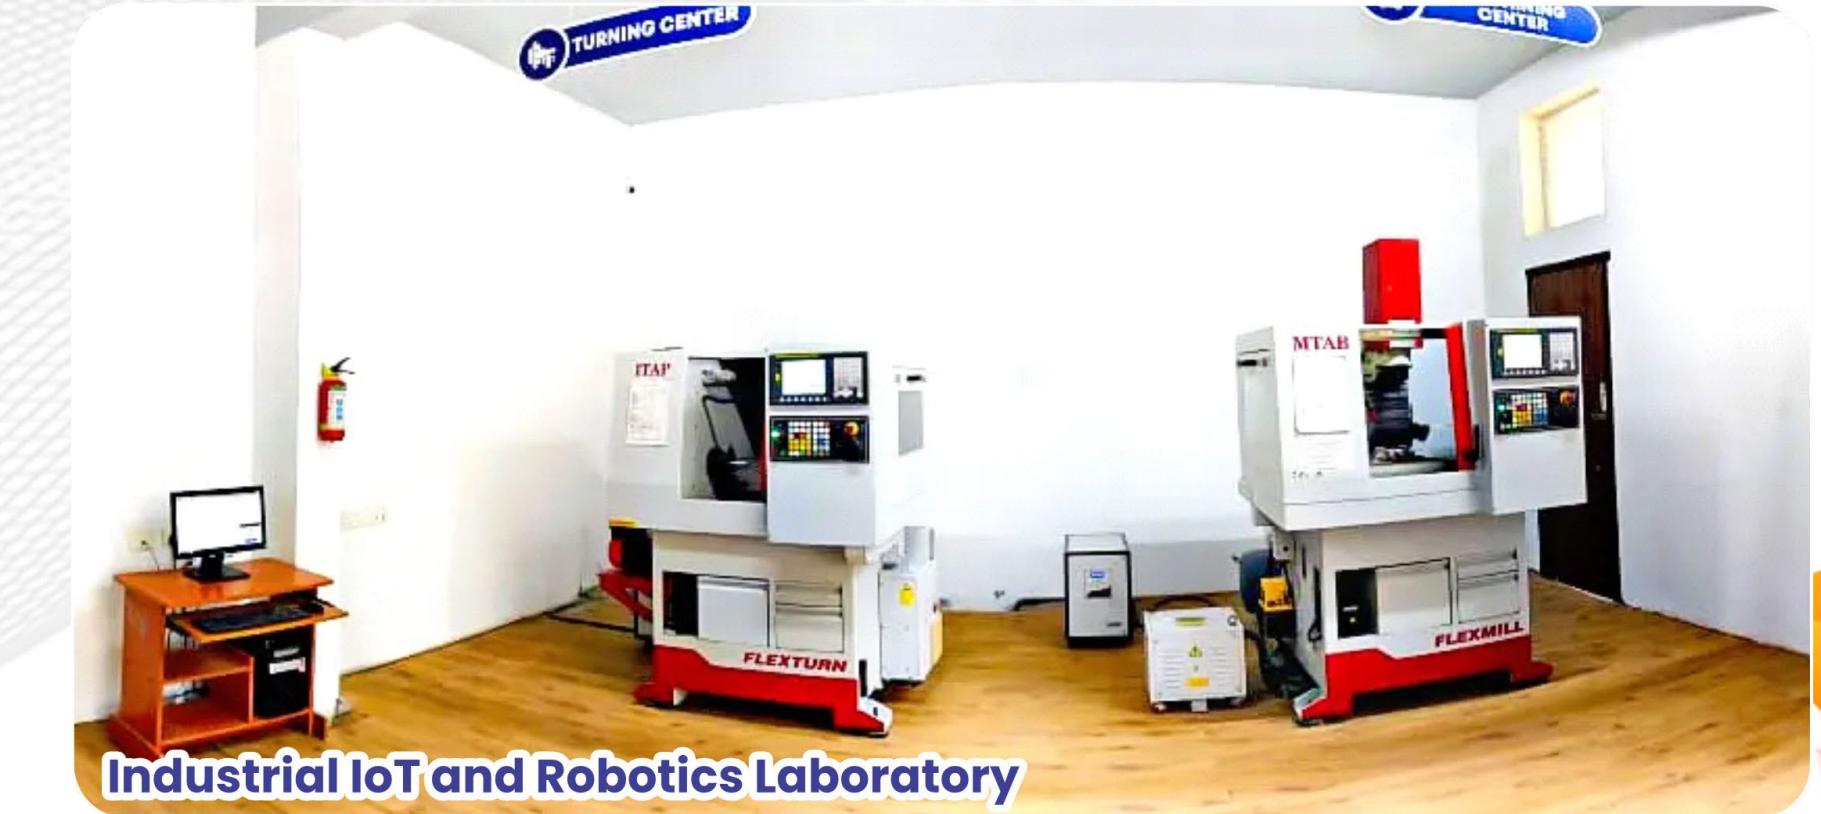

Advanced Material Processing and Testing Laboratory

Fluid Mechanics and Machinery Laboratory

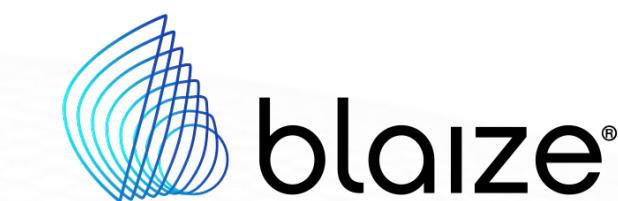

Thermal Engineering Laboratory

Industrial IoT and Robotics Laboratory
